

## Individual Status VI

### ***Past week goals:***

- Update backlog
- Maintain communication with the group
- Create additional views for the additional features for our product

### ***Progress this week:***

- What I've done: updated the project backlog, submitted sprint 6, created additional functionality features, pushed them to GitHub
- What worked: Lauren still focused on creating the html and css files while me and the other members worked on connecting the files and polishing the code so that everything runs smoothly.
- What I learned: How to add additional elements to a flask application that wasn't taught in class, such as sorting or adding images
- Where I am stuck: I was stuck on sorting some elements and showing the user's name but everything was resolved.

### ***Plans/goals for this week***

- Update backlog
- Maintain communication with the group
- Test the application for any errors
- Adding likes or dislikes to the post
