Individual Status V

Past week goals:

• Update backlog

• Maintain communication with the group

• Complete sprint 5

Progress this week:

• What I've done: updated the backlog, integrated our files for the project into git and pushed them to GitHub.

• What worked: Lauren focused on creating the html and css files for the project so that I could mainly focus on putting our files into a git project. This worked well because this tactic benefitted both of our strengths.

• What I learned: How to create a flask application from beginning to end with no outline

• Where I am stuck: I don't feel stuck on anything currently. The main thing I struggled on with our project so far is constructing the database but everything was resolved with the issue.

Plan/goals for this week

• Update backlog

• Maintain communication with the group

• Create additional views for the additional features for our product
